

Vacuums designed for a cleaner environment inside & outside

Available in 3
models with
1.2 HP
400 Hz motors.
The Probe™ and
Probe™ Junior
Backpacks ,
Aisle Vac and
Airline Vac

The tanks are
rotationally
molded of high
impact plastic,
making them
resistant to
chemical attack
and dents.

Backpack Vac - Aisle Vac - Airline Vac

the Probe™ & Probe™ Junior Backpacks

Compact and lightweight, the Probe™ is designed for operator's comfort. Ergonomics backrest with lumbar support reduces back fatigue especially over extended operation.

Vacuum carpeted and hard surfaces areas, under, aircraft seats, in restrooms, along corners and edges quickly and easily.

Four layer filtration system of micro cloth, micro bag, motor filter and dual cell noise filters that maintains maximum cleaning efficiency, for a clean air environment and reduced noise level.

Equipped with a 2 stage, 1.2 HP 400 Hz motor, 94 CFM - waterlift 97".

Top fill design reduces clogging, allowing the filter bag to reach its maximum fill capacity without loss of cleaning during extender operation.

Tapered body allows air flow to circulate around vacuum's inside wall, preventing bag from contacting the inside wall as it fills up.

The stretch hose expands from 2 feet to 7+ feet and will not hinder the operator. It is easy to attach and remove from the vacuum cap.

Available in two models the Probe™ with a 10 quart capacity and Probe™ Junior with a 6 quart capacity.

the Aisle Vac

Ideal for use on small and large aircraft. Clean quickly and efficiently in hard to reach and limited access areas.

Only 10" wide travels easily down aisle and across aisles on four 2" ball bearing casters.

Special 400 Hz design motor head with lift handle is equipped with a powerful continuous cooling 1.2 HP air-thru motor, 94 CFM - waterlift 90".

A twist lock plug securely holds the extension cord, preventing it from pulling out when under pressure.

Dual filter system includes a large pleated filter and totally enclosed

reusable cloth filter bag for maximum filtration.

Includes a 10 foot hose with swivel connector that attached to the positive locking inlet fitting.

the Airline Vac

This compact vacuum is designed for dry pickup to clean carpeted and hard surfaces and especially in small and hard to reach areas.

The steel head has ventilation holes to keep it cool during operation and diffuses air for minimal velocity blow.

It is equipped with a special 400 Hz, 1.2 HP air-thru continuous cooling motor, 94 CFM - waterlift 90".

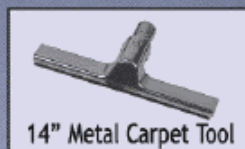

The 5 gallon tank is rotationally molded of high impact plastic with a 1/4" thick wall and equipped with four 2 1/2" ball bearing swivel casters.

To ensure a positive vacuum seal the tank has a heavy-duty twist and latch system that is flush mounted. Won't catch on seats or mark walls.

Twist lock plug securely holds the extension cord, preventing it from pulling out when under pressure.

The filtration system includes a removable cloth filter and large totally enclosed disposable paper filter bag for greater filtration area.
